

Economic analysis of surveillance systems/components should be required **as an aid to decision-making in surveillance to inform the allocation of scarce resources**. I

t shows the consequences of alternatives and helps to identify which of these is to be preferred from an economic point of view.

Economics is a discipline focused on the efficiency criteria for making choices between alternative uses of limited resources. It provides robust criteria to assess how decisions about the allocation of resources **impact on the well-being of different groups of people in society and for society as a whole**.

A unifying underlying principle of economic analyses is to provide a measure of the relative value attached to **competing alternative strategies** and thereby **facilitate decisions about the allocation of resources**.
